

MATTHEW RESTINE

Senior Software Engineer

Milltown, NJ | (908) 510-5024 | matthew.restine@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

I am a software engineer with 14 years of experience working across the stack building performant web applications using technologies like TypeScript, React, Node, and AI.

EXPERIENCE

Senior Software Engineer

Wizard – Remote

June 2026 – September 2026

TypeScript, Node, GraphQL, React, Postgres, MongoDB

- Worked across wizard.com's primary customer interface, internal tooling, and backend hub applications using agentic tools to accelerate ramp-up time building features autonomously
- Created a new Compare experience as an A/B experiment against the existing UI, working across teams to get designs and consistently formatted data from the AI models
- Enabled new external search functionality and filtering, allowing results to be pulled from new partner retailers as well as enabling users to better refine recommendation sources
- Created a new experience for follow-up suggestions allowing users to more accurately refine searches that drove 20% higher suggestion interaction as well as introspection tooling
- Identified and fixed problems with logging patterns by cleaning PII out of logs for compliance and adjusting severity to ensure alerts are clean and actionable

Senior Software Engineer

Rocket Loans – Remote

July 2023 – March 2026

TypeScript, React, Node, Next.js, NestJS, Postgres, Camunda, Jest, Cypress

- Leveraged AI tooling throughout the development process for initial solutioning, double checking requirements, and addressing pull request feedback
- Helped build and launch a multi-tenant loan origination platform to replace the legacy system, working with stakeholders across product, design, data, marketing, and operations
- Led technical design and authored documentation to rebuild the tracking items experience to increase functionality and configurability for developers and operations
- Led implementation of the new direct mail experience to increase traffic and conversion
- Created and authored documentation on a new standard for sending client emails
- Used analytics reporting and client replay data to proactively surface defects before reports
- Created specialized internal tooling to eliminate the need for some third party software needed to test during development, allowing less technical stakeholders to test specific scenarios without developer intervention or demonstration

Senior Software Engineer

Boxed – New York, NY / remote

December 2015 – March 2023

React, TypeScript, Sass, Node, Express, MongoDB

- Helped build and maintain the mothership CMS which offered configurations across 120 different models spanning business areas including merchandise, marketing, customer service, and operations
- Created a revenue stream by building a brand new vendor-facing analytics platform which surfaced real time sales, campaign performance, inventory, geographic, customer path data and more to top global CPG companies, resulting in \$40k per month revenue
- Implemented a ground-up redesign of the Ad Platform portal allowing vendor partners more granular control over listing placement bids, resulting in a 30% increase in ad spend revenue
- Led process development for internationalization across several apps, including automated translation partner integration, increasing market for enterprise SaaS partners
- Authored documentation and trained teammates on applications, internationalization, role-based access control, and vulnerability patching

Application Developer

HBC Digital – New York, NY

September 2014 – December 2015

Alfresco, AEM, Java, JSP, JavaScript

- Worked on migration from Alfresco as a CMS to a custom AEM integration
- Built a custom photo asset manager in AEM to replace external software
- Created automated solutions to common issues eliminating a frequent need for engineer support

Web Developer

D2 Creative – Somerset, NJ

September 2013 – September 2014

Java, Spring, Hibernate, MySQL, JSP, JavaScript, jQuery

- Worked with a team on shorter projects managing multiple client deadlines

Associate Programmer Analyst

EOIR Technologies – Toms River, NJ

May 2012 – September 2013

Java, Spring, Hibernate, MySQL, NISTPack, JavaScript, ExtJS, jQuery, CanJS

- Graduated from intern to full time employee in May 2013 and had TS/SCI security clearance
- Created a desktop application allowing visibility into biometrics files

EDUCATION

BS, Computer Science – Rutgers University

May 2013
